

Sample Regulatory Document — RBI KYC Compliance

Document ID: RBI-KYC-SAMPLE-2026

Version: 1.0

Effective Date: 1 January 2026

1. Customer Due Diligence

Financial institutions should perform customer due diligence before establishing a relationship or processing transactions where identification and verification are required. The institution should collect and verify appropriate customer and beneficial-owner information.

2. Customer Identification

The compliance process should capture relevant identity information, verify the information using appropriate documents or reliable sources, and maintain records according to applicable retention requirements.

3. High-Risk Customers and Jurisdictions

Transactions involving customers, counterparties, or jurisdictions identified as high risk should receive enhanced review. Additional information and approval may be required before a transaction is completed.

4. Non-KYC Verified Counterparty

Where required customer or counterparty verification has not been completed, the transaction should be referred for compliance review. The institution should not treat missing verification as equivalent to completed due diligence.

5. Transaction Monitoring

Institutions should maintain processes for identifying unusual or potentially suspicious transaction activity. Relevant transaction information should be retained to support investigation and audit.

6. Record Keeping

Compliance records should contain sufficient information to allow an authorized reviewer to understand the decision, the evidence considered, and the applicable policy or regulatory requirement.

Important: This is a synthetic training document created only for the technical assessment prototype. It is not an official RBI document and must not be used for real regulatory compliance decisions.
